

**Curriculum Intent:** Students continue to explore new subject content in physics, tackling more challenging concepts at a greater depth than they have done so previously. Students continue to develop scientific skills, directly linked to their required practicals including forming hypotheses, clear written methods, knowledge, and use of scientific equipment as well as presenting and analysing results. The Assessment outcomes are AO1: Demonstrate knowledge and understanding of scientific ideas, scientific techniques, and procedures. AO2: Apply knowledge and understanding of scientific ideas, scientific enquiry, techniques, and procedures. AO3: Analyse information and ideas to interpret, evaluate, make judgements, draw conclusions, develop experimental procedures, and improve experimental procedures.

**Curriculum Intent:** In their final year of study, Year 11 students will develop a deep understanding of scientific ideas making explicit links between topics studied. They will develop independence and gain confidence in working and thinking scientifically. Students continue to develop scientific skills, directly linked to their required practicals including forming hypotheses, clear written methods, knowledge, and use of scientific equipment as well as presenting and analysing results. The Assessment outcomes are AO1: Demonstrate knowledge and understanding of scientific ideas, scientific techniques, and procedures. AO2: Apply knowledge and understanding of scientific ideas, scientific enquiry, techniques, and procedures. AO3: Analyse information and ideas to interpret, evaluate, make judgements, draw conclusions, develop experimental procedures and improve experimental procedures.

velocity through a vacuum (space) or air

- Lenses use the refraction of visible light to form images

magnetic material (iron, steel, cobalt and nickel) is called the magnetic field.

- When a current flows through a conducting wire a magnetic field is produced around the wire. The strength of the magnetic field depends on the current through the wire and the distance from the wire.
- When a conductor carrying a current is placed in a magnetic field the magnet producing the field and the conductor exert a force on each other.

the dwarf planets that orbit around the Sun. Natural satellites, the moons that orbit planets, are also part of the solar system. A star goes through a life cycle. The life cycle is determined by the size of the star. Gravity provides the force that allows planets and satellites (both natural and artificial) to maintain their circular orbits.

Key Vocabulary						
<p><b>Assessment</b></p>	<p><u>AQA physics unit 5</u></p> <ul style="list-style-type: none"> <li>• Calculate the multiplied force or distance of a lever</li> <li>• Determine the type of lever</li> <li>• Explain, using the idea of force, momentum and time, the function of a range of road safety equipment.</li> </ul> <p><u>AQA physics unit 6</u></p> <ul style="list-style-type: none"> <li>• Describe the features of transverse and longitudinal waves</li> <li>• Use the wave equation to calculate values for waves</li> </ul>	<p><u>AQA physics unit 6</u></p> <ul style="list-style-type: none"> <li>• Describe a method to measure the speed of sound waves in air and ripples on a surface.</li> <li>• Show how changes in velocity, frequency and wavelength, in transmission of sound waves from one medium to another, are inter-related.</li> <li>• Describe the effects of reflection, transmission and absorption of waves at material interfaces</li> <li>• Give brief explanations why each type of electromagnetic wave is suitable for the practical application.</li> <li>• Construct ray diagrams to illustrate the similarities and differences between convex and concave lens</li> </ul>	<p><u>AQA physics unit 6</u></p> <ul style="list-style-type: none"> <li>• Explain how the interaction between greenhouse gases and electromagnetic radiation leads to the greenhouse effect.</li> </ul> <p><u>AQA physics unit 7</u></p> <ul style="list-style-type: none"> <li>• Draw the magnetic field pattern of a bar magnet showing how strength and direction change.</li> <li>• Draw the magnetic field pattern for a straight wire carrying a current and for a solenoid</li> <li>• Show that Fleming’s left-hand rule represents the relative orientation of the force, the current in the conductor and the magnetic field.</li> <li>• Explain how the effect of an alternating current in one coil in inducing a current in another is used in transformers.</li> </ul>	<p><u>AQA physics unit 7</u></p> <ul style="list-style-type: none"> <li>• Explain how the force on a conductor in a magnetic field causes the rotation of the coil in an electric motor</li> <li>• Explain the function of a generator</li> </ul> <p><u>AQA physics unit 8</u></p> <ul style="list-style-type: none"> <li>• Explain how, at the start of a star’s life cycle, the dust and gas drawn together by gravity causes fusion reactions.</li> <li>• Describe the similarities and distinctions between the planets, their moons, and artificial satellites.</li> </ul>	<p><u>AQA physics unit 8</u></p> <ul style="list-style-type: none"> <li>• Describe how red-shift provides evidence for the Big Bang Model</li> </ul> <p><u>End of course revision</u></p> <ul style="list-style-type: none"> <li>• Practicing extended writing answers, especially those related to required practicals.</li> <li>• Opportunity to fine-tune exam skills.</li> <li>• Re-visit content as informed by March Progress Exams.</li> <li>• Re-visit calculations within the Physics curriculum.</li> </ul>
